

Pacific Cod Fillets

Alaskan Cod, better known as Pacific Cod, is white, tender, lean and flaky with a mild taste.

Its moisture content is slightly higher than Atlantic Cod, making it ideal for baking, sauteing, steaming or frying.

Pacific Cod is one of the best managed and most valuable fisheries in the USA. Wild caught, these fillets are cut and frozen at sea to seal in freshness! These 24 plus ounce fillets are completely boneless and skinless! With Lent right around the corner, now is the perfect time to discuss this cost-effective item with your customers, for their winter menu.
